Tsukishima Kikai Co., Ltd.

Tsukishima Kikai Co., Ltd. Expands Strategic Partnership with Zeppelin Systems GmbH to Strengthen Mixer Business in Japan

Tsukishima Kikai Co., Ltd. is proud to announce the expansion of its strategic business partnership with Germany-based Zeppelin Systems GmbH, aimed at accelerating growth and innovation in the industrial mixer market across Japan.

This enhanced collaboration marks a significant milestone in Tsukishima Kikai's mixer business, which has historically operated under a licensing agreement with MTI, which is a Zeppelin Systems brand today. With this new agreement, Tsukishima Kikai will now also handle Henschel mixers, both of which are leading technologies under the Zeppelin Systems umbrella.

Since the mid-1900s, the mixer market in Japan and Asia has flourished through technology licensing from global pioneers Henschel and MTI. In the 2000s, both companies became subsidiaries of Zeppelin Systems, consolidating their expertise and innovation. Tsukishima Kikai has played a key role in localizing MTI mixer technology and providing robust customer support throughout the region.

Under the expanded partnership, Tsukishima Kikai will:

- Promote and support both Henschel and MTI mixers in Japan.
- Lead business development and localization efforts for Zeppelin's latest mixer technologies in the field of battery and many other applications.
- Provide comprehensive customer support to ensure optimal performance and satisfaction.

In conjunction with this partnership, Zeppelin Systems plans to launch a next-generation mixer that integrates the unique advantages of both Henschel and MTI technologies. Tsukishima Kikai will spearhead its market introduction and customer engagement in Japan.

This partnership represents a new chapter in our commitment to delivering world-class mixing solutions, and by combining the strengths of Henschel and MTI, and leveraging Zeppelin's and TSK's innovation, we are well-positioned to meet the evolving needs of our customers.

Details of this partnership will be announced at this year's Powtex 2025 International Powder Technology Exhibition in Osaka.
